SOCIETY**

A BIOCHEMICAL SOCIETY TRAINING EVENT

3rd UK Workshop on membrane proteins: solubilisation and biophysical characterisation

**4–6 April 2022
Aston University, Birmingham**

This three-day training event for early career researchers will focus on the function of biological membranes and on the biophysical techniques available to study their components in the context of biology and biotechnology. The event will comprise lectures, computer and laboratory-based practical sessions. Participants will leave the event with new knowledge and protocols that will allow them to use biophysical techniques for studying components of biological membranes in their research.

Topics include:

- High throughput membrane protein expression
- Solubilisation strategies
- Membrane protein purification
- Structural determination via circular dichroism, crystallography and EM
- Lipid nanoparticles and their analysis
- Lipidomics via mass spectroscopy
- Biophysical analyses including NMR and neutron scattering

**This training event
will be followed
by 'European
SMALP'.**
