

**BIOCHEMICAL  
SOCIETY**

**A BIOCHEMICAL SOCIETY SCIENTIFIC MEETING**

# **UK DNA Replication meeting 2022**

**6–8 September 2022  
Birmingham, UK**

DNA Replication is one of the most fundamental processes in life. Every dividing cell has to duplicate its genome before cell division. Mistakes during DNA replication are a major cause of genomic instability that can lead to cancer development. With this in mind, research into biochemistry of DNA replication is of high interest for many groups around the world and biotech companies.

The Biochemical Society invites you to submit an abstract for an oral or poster presentation to share your work on a variety of themes, which include:

- Origins of replication
- Origin firing
- Elongation and termination
- Replication and chromatin
- Replication and transcription
- Replication stress

This meeting will provide an excellent opportunity to network with colleagues working in this field.

**Register online**
