

Information for the roles of Research Area II – Molecular Structure & Function Ordinary Members

Research Area II covers the broad areas of nucleic acids, proteins, membranes, lipids, lipoproteins, molecular modelling of mechanisms, enzymes, rational drug design, carbohydrates, molecular interactions.

Members of this Research Area meet quarterly to put forward ideas for conferences, review events proposals from within their field of expertise, encourage nominations to the Society's Awards programme and engage with the Society's events strategy.

We are looking for someone who is engaged in one or more of these areas of research to provide input into discussions and collaborate with fellow members to support such activities.

You will have the opportunity to network with peers and colleagues, helping to shape the Society's meetings programme and input into the delivery of the wider Society strategy for the benefit of the community.
