

Information for the roles of Research Area IV – Cells Ordinary Members

Research Area IV covers the broad areas of lipids, organelles, trafficking, protein turnover, cytoskeleton, cell cycle, cell adhesion and migration, phagocytosis, apoptosis, matrix biology, neurotransmitters, structures, cell walls, nuclear motors, glycobiology, glycosylation, micro-organisms, membrane fusion, synaptic function, ion channels, neuronal signalling, exocytosis, endocytosis and secretion.

Members of this Research Area meet quarterly to put forward ideas for conferences, review events proposals from within their field of expertise, encourage nominations to the Society's Awards programme and engage with the Society's events strategy.

We are looking for someone who is engaged in one or more of these areas of research to provide input into discussions and collaborate with fellow members to support such activities.

You will have the opportunity to network with peers and colleagues, helping to shape the Society's meetings programme and input into the delivery of the wider Society strategy for the benefit of the community.
